

AI Usage Declaration

Name: Imtiaz Hossain

ID: 23101137

Course: CSE 489 - Mobile Computing

Assignment 1: VangtiChai (Taka Change Calculator)

Statement of AI Usage

I declare that I have used Artificial Intelligence (AI) tools during the development of this assignment for specific supportive tasks.

AI Tools Used

Tool: Google Studio / Claude

Purpose:

1. Assisting with the initial setup of the development environment.
2. Suggesting optimizations for existing code to improve performance and readability.
3. Providing guidance on planning responsive Android layouts to ensure compatibility across different screen sizes and orientations.

Own Contribution:

1. The core logic and all primary code for this application were written by me. While AI served as a tool for optimization and layout planning,

I have:

- i. Developed the entire functional logic for the Taka change calculation.
- ii. Manually designed and implemented the custom keypad and UI elements.
- iii. Thoroughly tested the application on multiple emulator configurations (phone, tablet, portrait, landscape).

- iv. Written the final project documentation based on my own development process.

Conclusion:

The AI tool served as a productivity enhancer for environment setup and layout strategy. The final submission and the functional logic within the codebase are the result of my own work and understanding of Android development principles.
