Introduction

UniBoard is a comprehensive web-based platform designed to revolutionize how campus clubs and student organizations communicate and engage with the university community at BRAC University. In many universities, information about club activities, events, and announcements is scattered across multiple platforms like social media groups, email threads, physical noticeboards, and word of mouth, making it difficult for students to stay informed about opportunities that align with their interests. UniBoard addresses this challenge by providing a centralized digital noticeboard where all club-related information is accessible in one place. The platform empowers verified student clubs with dedicated dashboards where they can create, manage, and publish events and notices, complete with the ability to upload engaging visual content like posters and flyers. Students, on the other hand, benefit from a personalized experience where they can discover events tailored to their interests, receive real-time notifications from clubs they follow, and use powerful search and filtering tools to find exactly what they're looking for based on criteria such as event type, date, location, or club name. Built with modern web technologies including PHP and MySQL, UniBoard features a fully responsive design that ensures seamless access across all devices, from desktop computers to smartphones. The platform integrates secure university login credentials, ensuring that only authorized students and club administrators can access and contribute to the system. Beyond simple event listing, UniBoard also provides clubs with valuable engagement analytics, allowing them to track event reach, attendance trends, and user interaction patterns, which helps them better understand their audience and improve future events. With features like calendar synchronization, automated event reminders, and a mobile-friendly interface, UniBoard transforms campus life from fragmented and disorganized to connected and streamlined, fostering a more vibrant and engaged university community where students never miss out on opportunities that matter to them.

Project Features

ID, Name	Features [3 per member]	
24241157, Sanzitul Islam Siam	Ft 1	Advanced Event Search & Filtering – Students can easily find events by applying filters like club name, event type, date, or location.
	Ft 2	Personalized Event Feed – Each student sees a tailored list of events based on their interests and followed clubs.
	Ft 3	Engagement Analytics – Clubs can view insights like event reach, attendance count, and user engagement trends.
	Ft 4	Real-Time Notifications – Students receive instant push or email alerts for new or updated events from clubs they follow
23101137, Imtiaz Hossain	Ft 1	Event Scheduling System - Verified clubs can schedule, modify, and launch time-bound gatherings with specific venues and dates via a calendar interface.
	Ft 2	Digital Notice Board - Club administrators can draft, edit, and broadcast informational announcements and news updates directly to the community feed.
	Ft 3	Poster & Media Uploads – Clubs can attach images, posters, or flyers to make their event posts more engaging.
	Ft 4	Admin Control Panel – Project administrators can review and approve club applications, verify/unverify clubs, assign or remove admin roles, manage user accounts, and oversee all platform activities.

ER/EER Diagram

Schema Diagram

Schema Diagram

Normalization

- a. The Schema is in **1NF form** as none of the relation has multivalued, or composite attributes. Also, no nested relation is observed.
- b. The Schema is in **2NF form** as none of the relations have any attributes that doesn't depend on all the prime attributes to be uniquely identified. The relations which have only one primary key, other attributes can be uniquely identified by that key independently and the relations with composite primary keys have no other attributes in that relation. So, no existence of partial functional dependencies can be seen.
- c. The Schema is in **3NF form** too. Since none of the attributes in any relation depend on any non prime attribute to be uniquely identified, any existence of transitive dependencies is not possible; which makes the Schema stay in 3NF form.

Frontend Development

Contribution of ID : 24241157, Name : Sanzitul Islam Siam

1. Advanced Event Search & Filtering

Contributions:

- Built responsive filter form using CSS Grid (auto-adapts to screen size)
- Created custom dropdown styling with inline SVG icons
- Designed event card grid layout with hover effects
- Implemented focus states for accessibility

UI Features:

- 4 filter dropdowns (Club, Type, Location, Date)
- Filter & Reset buttons
- Responsive event grid (auto-adjusts columns)
- Glassmorphism design with backdrop blur

2. Real-Time Notifications

Contributions:

- Designed notification badge with unread count
- Created notification list with read/unread states
- Built notification cards with timestamps
- Implemented mark-as-read functionality with visual feedback

UI Features:

- Badge indicator for unread notifications
- Color-coded notification types
- Hover effects on notification cards
- Responsive layout for mobile

3. Personalized Event Feed

Contributions:

- Created toggle UI between "All Events" and "My Feed"
- Designed interest selection checkboxes in settings
- Built dynamic page title based on view mode
- Implemented conditional filter display (hidden in My Feed view)

UI Features:

- Interest checkboxes with event type icons
- Visual distinction between "All" and "My Feed"
- Conditional rendering of filter section
- Save button with loading state

4. Engagement Analytics**Contributions:**

- Designed stat cards with large numbers and labels
- Integrated Chart.js for interactive bar charts
- Created responsive data table for event details
- Built clean dashboard layout with proper spacing

UI Features:

- Stat cards with gradient backgrounds
- Interactive bar chart (hover tooltips)
- Scrollable data table
- Color-coded metrics

1. Dashboard Interfaces:

Contributions:

- Designed event creation form with structured input fields (title, description, datetime)
- Implemented file upload interface with preview area for event posters
- Created event editing form with pre-populated fields and current poster display
- Built location and event type dropdown selectors with database integration

UI Features:

- Form validation with real-time error indicators
- Datetime picker with calendar interface
- Drag-and-drop poster upload area
- Responsive form layout that stacks on mobile

2. Digital Notice Board Interface:

Contributions:

- Created clean notice creation form with title and content fields
- Designed notice display cards for club pages and user feed
- Implemented notice history view for club admin dashboard
- Built responsive notice grid layout with proper spacing

UI Features:

- Multi-line textarea with auto-resize functionality
- Color-coded notice cards with club badges
- Expandable content for long announcements
- Timestamp display with relative dates

3. Dashboard Layouts:

Contributions:

- Designed Club Admin Dashboard with quick action buttons and event cards

- Built User Dashboard with personalized event feed and application status table
- Created Admin Dashboard with application review interface
- Implemented collapsible sidebar navigation with active state highlighting

UI Features:

- Card-based layouts with gradient backgrounds
- Interactive stat cards displaying key metrics
- Quick action button grid for common tasks
- Responsive sidebar that converts to overlay on mobile

4. Authentication & Forms:

Contributions:

- Designed login and registration forms with proper validation
- Created club admin application form with status badges
- Implemented password visibility toggle for better UX
- Built flash message system for form feedback

UI Features:

- Color-coded flash messages (success/error/warning)
- Form field validation indicators
- Loading states on submit buttons
- Clear error messages with helpful hints

5. Responsive Design & Mobile Interface:

Contributions:

- Implemented CSS media queries for all major breakpoints
- Created mobile-friendly navigation with hamburger menu
- Designed touch-friendly buttons and interactive elements
- Built responsive grid layouts that adapt to screen sizes

UI Features:

- Collapsible sidebar with smooth animations
- Vertical card stacking on small screens

- Touch-optimized button sizes (44px minimum)
- Fluid typography that scales with viewport

6. Visual Design & Theming:

Contributions:

- Implemented light theme with CSS custom properties
- Designed gradient accents using purple/cyan/pink color scheme
- Integrated Google Fonts (Outfit) for modern typography
- Created consistent spacing and layout system

UI Features:

- Glassmorphism effects with backdrop blur
- Smooth hover transitions on all interactive elements
- Color-coded status indicators
- Subtle shadows for depth and hierarchy

Backend Development

Contribution of ID : 24241157, Name : Sanzitul Islam Siam

1. Advanced Event Search & Filtering

Contributions:

- Built dynamic SQL query builder with 4 filter types (Club, Event Type, Location, Date)
- Implemented prepared statements with parameter binding for SQL injection prevention
- Designed multi-table JOIN queries (Event, Club, EventType, Location)
- Added smart defaults to show only upcoming events

Key Code:

```
// Dynamic query construction

if ($club_id) {

    $sql .= " AND c.Club_ID = ?";

    $params[] = $club_id;

}

$stmt = $pdo->prepare($sql);

$stmt->execute($params);
```

2. Real-Time Notifications

Contributions:

- Designed many-to-many relationship (Users ↔ Notifications)
- Implemented automatic notification triggers on event create/update
- Built targeted notification system - only followers receive alerts
- Created read/unread status tracking with badge counts

Key Code:

```
CREATE TABLE Notifications (

    Notification_ID INT PRIMARY KEY,

    Content TEXT,
```

```

        Is_read BOOLEAN DEFAULT FALSE
    );

    CREATE TABLE Gets_notification (

        Student_ID INT,

        Notification_ID INT

    );

```

3. Personalized Event Feed

Contributions:

- Created UserInterests table for student preferences
- Implemented interest-based filtering using subqueries
- Built toggle between "All Events" and "My Feed" views
- Designed OR logic: shows events from followed clubs OR matching interests

Key Code:

```

$sql .= " AND (

        e.Club_ID IN (SELECT Club_ID FROM Follows_club WHERE
        Student_ID = ?)

        OR

        e.Event_Type_ID IN (SELECT Event_Type_ID FROM UserInterests
        WHERE Student_ID = ?)

    )";

```

4. Engagement Analytics

Contributions:

- Designed EventAnalytics table with real-time tracking
- Implemented
- update_analytics()
- function with add/remove operations
- Built complex aggregation queries with subqueries for club insights
- Created JSON data preparation for Chart.js visualization

- Added authorization - only club admins can view analytics

Key Code:

```
function update_analytics($pdo, $event_id, $type, $operation = 'add') {

    $pdo->prepare("INSERT IGNORE INTO EventAnalytics (Event_ID)
    VALUES (?)")

        ->execute([$event_id]);

    $op_sign = ($operation === 'remove') ? '-' : '+';

    $sql = "UPDATE EventAnalytics

        SET {$type}_count = GREATEST(0, {$type}_count $op_sign
        1)

        WHERE Event_ID = ?";

    $pdo->prepare($sql)->execute([$event_id]);

}
```

Contribution of ID : 23101137, Name : Imtiaz Hossain

1. Event Scheduling System: Verified clubs can schedule, modify, and launch time-bound gatherings with specific venues and dates via a calendar interface.

Contributions:

- Built complete event CRUD operations (Create, Read, Update, Delete) with form validation
- Implemented event-club relationship with foreign key constraints for data integrity
- Designed event editing system with ownership verification to prevent unauthorized modifications
- Created event deletion handler with automatic cleanup of associated media files
- Developed location and event type dropdown population from database tables
- Integrated datetime picker for start/end time selection with proper formatting
- Built multi-table JOIN queries (Event, Club, Location, EventType, EventMedia) for comprehensive event data retrieval

Key Code:

```
UniBoard - create_event_handler.php
43 try {
44     // Insert event
45     $stmt = $pdo->prepare("
46         INSERT INTO Event (Title, Description, Start_time, Location_ID, Event_Type_ID, Club_ID)
47         VALUES (?, ?, ?, ?, ?, ?)
48     ");
49     $stmt->execute([$event_name, $description, $start_time, $location_id, $event_type_id, $club_id]);
50
51     $event_id = $pdo->lastInsertId();
52 }
```

2. Digital Notice Board: Club administrators can draft, edit, and broadcast informational announcements and news updates directly to the community feed.

Contributions:

- Designed and implemented dedicated Notice table separate from general Notifications system
- Created notice creation handler with club association and input validation

- Built notice display system across multiple pages (club dashboard, user feed, club pages)
- Implemented JOIN queries to fetch notices with club names for proper context
- Added XSS prevention with htmlspecialchars() for all user-generated content
- Designed notice history view for club admins to track all published announcements
- Implemented line break preservation using nl2br() for multi-paragraph content formatting

Key Code:

```

16 if (!$club_info) {
17     set_flash('notice', 'Access denied', 'error');
18     redirect('../create_notice.php');
19 }
20
21 $club_id = $club_info['Club_ID'];
22
23 // Get form data
24 $title = sanitize_input($_POST['title'] ?? '');
25 $content = sanitize_input($_POST['content'] ?? '');
26
27 // Validation
28 $errors = [];
29 if (empty($title)) $errors[] = 'Title is required';
30 if (empty($content)) $errors[] = 'Content is required';
31
32 if (!empty($errors)) {
33     set_flash('notice', implode('<br>', $errors), 'error');
34     redirect('../create_notice.php');
35 }
36
37 try {
38     // Insert notice
39     $stmt = $pdo->prepare("
40         INSERT INTO Notice (Title, Content, Club_ID, Created_at)
41         VALUES (?, ?, ?, NOW())
42     ");
43     $stmt->execute([$title, $content, $club_id]);
44
45     set_flash('dashboard', 'Notice posted successfully!', 'success');
46     redirect('../dashboard.php');
47 } catch (PDOException $e) {
48     set_flash('notice', 'Failed to create notice: ' .
49         $e->getMessage(), 'error');
50     redirect('../create_notice.php');
51 }
52 ?>

```

3. Poster & Media Uploads: Clubs can attach images, posters, or flyers to make their event posts more engaging.

Contributions:

- Implemented secure file upload system with MIME type validation (JPEG, PNG, WebP only)
- Created automatic upload directory creation with proper permissions (0777)
- Built unique filename generation using event ID + timestamp to prevent collisions
- Designed EventMedia table to store file metadata with foreign key to Event table
- Implemented file cleanup system on event edit/delete to prevent orphaned files
- Added file existence checks before deletion operations to avoid PHP warnings
- Created conditional poster display system with fallback for missing files

Key Code:

```
UniBoard - create_event_handler.php
54 if (isset($_FILES['event_poster']) && $_FILES['event_poster']['error'] === UPLOAD_ERR_OK) {
55     $upload_dir = '../uploads/event_posters/';
56
57     // Create upload directory if it doesn't exist
58     if (!is_dir($upload_dir)) {
59         mkdir($upload_dir, 0755, true);
60     }
61
62     $file_tmp = $_FILES['event_poster']['tmp_name'];
63     $file_name = $_FILES['event_poster']['name'];
64     $file_ext = strtolower(pathinfo($file_name, PATHINFO_EXTENSION));
65     $allowed_ext = ['jpg', 'jpeg', 'png', 'webp'];
66
67     if (in_array($file_ext, $allowed_ext)) {
68         $new_filename = 'event_' . $event_id . '_' . time() . '.' . $file_ext;
69         $upload_path = $upload_dir . $new_filename;
70
71         if (move_uploaded_file($file_tmp, $upload_path)) {
72             // Insert into EventMedia table
73             $media_url = 'uploads/event_posters/' . $new_filename;
74             $stmt = $pdo->prepare("
75                 INSERT INTO EventMedia (File_name, Media_url, Media_type, Event_ID)
76                 VALUES (?, ?, ?, ?)
77             ");
78             $stmt->execute([$new_filename, $media_url, 'image', $event_id]);
79         }
80     }
81 }
```

4. Admin Control Panel: Project administrators have comprehensive platform oversight capabilities including application review, club verification, role management, and system-wide monitoring.

Contributions:

- Built application review dashboard with pending/approved/rejected status filtering
- Implemented club admin application approval workflow with automatic role assignment
- Created club verification toggle system with status tracking and timestamps
- Designed role assignment interface for adding/removing club admin privileges
- Developed club deletion handler with cascade cleanup of related data (events, notices, members)
- Implemented admin authentication checks using `is_project_admin()` helper function
- Created manage clubs interface showing all clubs with verification status and admin assignments
- Built user management system to monitor roles and permissions across the platform
- Implemented review tracking with reviewer ID and review timestamp logging
- Added flash message system for admin action confirmations and error notifications

Key Code:

```
UniBoard - club_application_handler.php

1  <?php
2  require_once '../config/database.php';
3  require_once '../includes/functions.php';
4
5  if (!is_logged_in()) {
6      redirect('../login.php');
7  }
8
9  if ($_SERVER['REQUEST_METHOD'] !== 'POST') {
10     redirect('../apply_for_club.php');
11 }
12
13 $user_id = $_SESSION['user_id'];
14 $club_id = (int)$_POST['club_id'] ?? 0;
15 $role_name = sanitize_input($_POST['role_name'] ?? '');
16 $message = sanitize_input($_POST['message'] ?? '');
17
18 // Validation
19 $errors = [];
20
21 if ($club_id <= 0) $errors[] = 'Please select a club';
22 if (empty($role_name) || !in_array($role_name, ['Club_President', 'Club_Admin'])) {
23     $errors[] = 'Please select a valid role';
24 }
25 if (empty($message)) $errors[] = 'Please explain why you want this role';
26
27 if (!empty($errors)) {
28     set_flash('application', implode('<br>', $errors), 'error');
29     redirect('../apply_for_club.php');
30 }
31
```

```

32 try {
33     // Check if user already has a role for this club
34     $stmt = $pdo->prepare("SELECT St_ID FROM Role WHERE St_ID = ? AND Club_ID =
?");
35     $stmt->execute([$user_id, $club_id]);
36     if ($stmt->fetch()) {
37         set_flash('application', 'You already have an admin role for this club'
, 'error');
38         redirect('../apply_for_club.php');
39     }
40
41     // Check if user has a pending application for this club
42     $stmt = $pdo->prepare("SELECT Request_ID FROM Role_Request WHERE Student_ID
= ? AND Club_ID = ? AND Status = 'Pending'");
43     $stmt->execute([$user_id, $club_id]);
44     if ($stmt->fetch()) {
45         set_flash('application',
46         'You already have a pending application for this club', 'error');
47         redirect('../apply_for_club.php');
48     }
49
50     // Get club name for success message
51     $stmt = $pdo->prepare("SELECT Name FROM Club WHERE Club_ID = ?");
52     $stmt->execute([$club_id]);
53     $club = $stmt->fetch();
54
55     // Insert application
56     $stmt = $pdo->prepare("
57     INSERT INTO Role_Request (Student_ID, Club_ID, Requested_Role, Request_M
essage, Status, Created_at)
58     VALUES (?, ?, ?, ?, 'Pending', NOW())
59     ");
60     $stmt->execute([$user_id, $club_id, $role_name, $message]);
61
62     set_flash('application', 'Application submitted successfully for ' .
htmlspecialchars($club['Name']) . '! Awaiting Project Admin approval.',
'success');
63     redirect('../apply_for_club.php');
64 } catch (PDOException $e) {
65     set_flash('application', 'Failed to submit application. Please try again.',
'error');
66     redirect('../apply_for_club.php');
67 }
68 }>

```

```

UniBoard - remove_club_admin_handler.php

15 $club_id = (int)($_POST['club_id'] ?? 0);
16
17 // Validation
18 if ($club_id <= 0) {
19     set_flash('clubs', 'Invalid club ID', 'error');
20     redirect('../manage_clubs.php');
21 }
22
23 try {
24     // Get club name for confirmation message
25     $stmt = $pdo->prepare("SELECT Name FROM Club WHERE Club_ID = ?");
26     $stmt->execute([$club_id]);
27     $club = $stmt->fetch();
28
29     if (!$club) {
30         set_flash('clubs', 'Club not found', 'error');
31         redirect('../manage_clubs.php');
32     }
33
34     // Get admin name before deleting
35     $stmt = $pdo->prepare("
36         SELECT u.Name
37         FROM Role r
38         JOIN User u ON r.St_ID = u.Student_ID
39         WHERE r.Club_ID = ?
40         AND (r.Role_name = 'Club_President' OR r.Role_name = 'Club_Admin')
41         LIMIT 1
42     ");
43     $stmt->execute([$club_id]);
44     $admin = $stmt->fetch();
45
46     // Delete the role assignment
47     $stmt = $pdo->prepare("
48         DELETE FROM Role
49         WHERE Club_ID = ?
50         AND (Role_name = 'Club_President' OR Role_name = 'Club_Admin')
51     ");
52     $stmt->execute([$club_id]);
53
54     if ($admin) {
55         $message = 'Removed ' . $admin['Name'] . ' as admin from ' . $club['Name'];
56     } else {
57         $message = 'Admin role removed from ' . $club['Name'];
58     }
59
60     set_flash('clubs', $message, 'success');
61     redirect('../manage_clubs.php');
62 } catch (PDOException $e) {
63     set_flash('clubs', 'Failed to remove admin: ' . $e->getMessage(), 'error');
64     redirect('../manage_clubs.php');
65 }
66 ?>

```

5. University Login Integration: Secure access for students and clubs using official university credentials.

Contributions:

- Implemented secure authentication system using crypt password hashing (PASSWORD_DEFAULT)
- Created session-based user state management with persistent login across pages
- Built login handler with credential verification using password_verify()
- Designed three-tier role-based access control (Regular User, Club Admin, Project Admin)
- Implemented helper functions (is_logged_in, is_club_admin, is_project_admin) for access verification
- Created club admin application and approval workflow with status tracking
- Built automatic role assignment upon application approval via Role table updates
- Added protected page access control with automatic redirect for unauthorized users

Key Code:

```
UniBoard - login_handler.php

10  // Validation
11  if (empty($email) || empty($password)) {
12      set_flash('login', 'Please fill in all fields', 'error');
13      redirect('../login.php');
14  }
15
16  try {
17      // Check user exists
18      $stmt = $pdo->prepare("SELECT Student_ID, Password, Name FROM User WHERE
GSuite_Email = ?");
19      $stmt->execute([$email]);
20      $user = $stmt->fetch();
21
22      if ($user && password_verify($password, $user['Password'])) {
23          // Login successful
24          $_SESSION['user_id'] = $user['Student_ID'];
25          $_SESSION['user_name'] = $user['Name'];
26          $_SESSION['user_email'] = $email;
27
28          // Remember me functionality
29          if ($remember) {
30              setcookie('remember_token', bin2hex(random_bytes(32)), time() + (86400 * 30
), "/");
31          }
32      }
```

```

32
33     // Check user role and redirect accordingly
34     $role = get_user_role($pdo, $user['Student_ID']);
35
36     if ($role === 'Project_Admin') {
37         set_flash('admin', 'Welcome back, Project Admin!', 'success');
38         redirect('../admin_dashboard.php');
39     } elseif ($role && (stripos($role, 'President') !== false || stripos($role,
'Admin') !== false || stripos($role, 'Executive') !== false)) {
40         // Club admin - check if club is verified
41         $club_info = is_club_admin($pdo, $user['Student_ID']);
42         if ($club_info) {
43             set_flash('dashboard', 'Welcome to your club dashboard!', 'success');
44             redirect('../dashboard.php');
45         } else {
46             set_flash('home', 'Login successful! Welcome back, ' . $user['Name'],
'success');
47             redirect('../index.php');
48         }
49     } else {
50         set_flash('home', 'Login successful! Welcome back, ' . $user['Name'],
'success');
51         redirect('../index.php');
52     }
53 } else {
54     set_flash('login', 'Invalid email or password', 'error');
55     redirect('../login.php');

Conclusion

UniBoard successfully addresses a critical challenge faced by university communities: the fragmentation of club activities and event information across multiple disconnected platforms. By consolidating all campus club communications, event announcements, and student engagement into a single, centralized digital platform, UniBoard transforms how students discover and participate in extracurricular activities. The platform's comprehensive feature set, including secure event scheduling, digital notice boards, media uploads, role-based access control, and real-time notifications, creates an ecosystem where club administrators can efficiently manage their organizations while students enjoy a personalized, streamlined experience tailored to their interests.

The technical implementation demonstrates a solid foundation in modern web development practices, utilizing PHP and MySQL with security-first principles including password hashing, prepared statements for SQL injection prevention, XSS protection, and role-based authentication. The modular backend architecture ensures maintainability and scalability, while the responsive frontend design guarantees accessibility across all devices. The three-tier user system (Regular Users, Club Admins, and Project Admins) provides appropriate permissions and controls, ensuring that the platform remains organized and secure while empowering clubs with the autonomy they need to engage their communities effectively.

Beyond its technical achievements, UniBoard's true value lies in its potential to foster a more vibrant and connected campus community. By eliminating the frustration of missed opportunities and scattered information, the platform enables students to make the most of their university experience. Clubs gain valuable insights through engagement analytics, allowing them to better understand their audience and improve future events. Project administrators maintain quality control through verification workflows and comprehensive oversight tools. As a result, UniBoard not only solves an immediate organizational challenge but also cultivates a culture of engagement, participation, and community building that enriches the entire university ecosystem. The platform stands as a testament to how thoughtful technology can bridge gaps, enhance communication, and create meaningful connections in educational environments.
